GRANTHAM RURAL DISTRICT COUNCIL.

ANNUAL REPORT

of the

MEDICAL OFFICER OF HEALTH

For the Year 1911.

CHARLES H. D. ROBBS, M.B.,

Medical Officer of Health.

January, 1912.

GRANTHAM RURAL DISTRICT.

REPORT of the Medical Officer of Health for the Year 1911.

To the Chairman and Members.

Gentlemen,

In accordance with instructions from the Local Government Board, I have the honour of submitting for your consideration my Fifth Annual Report on the Health and Sanitary Condition of the Rural District, together with other information dealing with the administration of the various Acts for the maintenance of Public Health. I submit a brief summary of the Vital Statistics before entering into further details.

SUMMARY.

Area of Rural District		85,827 acres.
Rateable Value :-	Land	£51,817.
	Houses	£67,427.
Population-Census 1901		12,426.
Population-Census 1911		12,257.
Birth Rate per 1,000		22.35.
Death Rate per 1,000		12.7.
Death Rate of Infants under one year, per 1,000		91.2.
Illegitimate births		18.

Your Medical Officer has on previous occasions alluded to the physical features of the district and chief occupations of the inhabitants. The results of the Census Returns are not at present available in respect of such occupations.

WATER SUPPLY OF THE DISTRICT.

During the year a return as to the Water Supplies of the District was made, and is now incorporated with the Report.

It will be noticed from this list that the greater part of the District is supplied by shallow wells. A large number of examinations has been made during the last five years of the water from wells in the District. Two villages-Braceby and Honington-which contained several polluted wells, have now been supplied with spring-water of good quality. It is to be hoped that this example will be followed by other villages.

The attention of your Council was drawn to the water supply of Colsterworth, and a Committee appointed to consider the subject made the following recommendation:-

> "The Council to request the various Owners of Property mentioned in the Surveyor's Report to make proper provision for the supply of wholesome water, either by cleansing out the existing wells on the Premises or where no Wells exist then by entering into an Agreement with the Owners of the adjoining property (where there is more than an available supply for such property) to supply them with water as will satisfy the Council that such Owner of Property has within a reasonable distance an available supply of wholesome water sufficient for consumption and use for domestic purposes of the inmates of the respective houses."

The water supply of another large village-Barrowby-cannot be considered satisfactory.

RIVERS AND STREAMS.

Pollution of Streams in your District occurs in several localities, but has been decidedly diminished during

the last few years. One case of pollution of a Stream was reported at South Witham during the year, and steps were taken to prevent a continuance of the nuisance.

DRAINAGE AND SEWERAGE.

During the year, work in connection with sewers has been carried out in Woolsthorpe, South Witham, and Aisby, where nine-inch sanitary pipes have been laid. Trapped road gulleys have been put in in Ropsley, Skillington and Barrowby.

Closet accomodation has been dealt with in former reports.

Scavenging is not undertaken by the Council.

OFFENSIVE TRADES.

A Knacker's Yard and a Fellmonger's premises in your District are frequently visited by your Sanitary Inspector. No complaints with regard to these premises have been received during the year.

SCHOOLS.

Your Medical Officer has on many occasions during the year communicated with the County Medical Officer of Health with regard to School matters, and in conjunction with him, taken action with regard to closure of Schools in the presence of epidemics and other sanitary matters.

During the year, the following Schools have been closed for infectious disease:-

Hough-on-the-Hill	-	Diphtheria
"	-	Whooping Cough
Denton	-	"
Haydour	-	Measles.

The County Medical Officer of Health is the School Medical Officer, and discharges the duties of Medical Inspector of the public elementary Schools.

FOOD.

MILK.-There are 45 registered cow-keepers in the District. Frequent inspections are carried out to enforce the regulations.

OTHER FOODS.-There are no existing Regulations in the District with regard to slaughter-houses. Your Sanitary Inspector has made many visits during the year to butchers', bakers', and other premises.

No action has been taken during the year in respect to impure milk or diseased meat.

HOUSING.

In the discharge of duties required by the Housing and Town Planning Act, the Sanitary Inspector, who was appointed as the Officer under the Act, has made inspections in 12 of the parishes during the year, and reported upon 100 houses, the state of repair of some of which was exceptionally bad.

Eleven houses were closed under the Act, statutory measures having to be instituted in the case of five of the houses to remove the tenants. Five houses were closed by the Owners, and three empty ones were not to be re-used. In regard to the other 81 houses, structural repairs were required in some cases, whilst in others sanitary conditions or abatement of existing nuisance demanded attention. Your Medical Officer and Sanitary Inspector by visits carried out under the duties of this Act have been enabled to obtain much information as to the adequacy of houses in the district.

Many cases of overcrowding were observed, and considerable difficulty was experienced in dealing with this condition, owing to the fact that there was usually no choice of other and more commodious residence to the families concerned. This has always in this district been the difficulty in dealing with overcrowding, every cottage in each village being almost invariably occupied.

Defects of structure were frequently noted, amongst the most important of which were deficiencies in roofs, and absence of eaves-spouting.

Insanitary conditions were found, consisting of absence of drains, untrapped drains, and insufficiency of privies.

Your Sanitary Inspector has furnished a table of the work done during the year, which is attached to the Report.

Several cottages have been erected during the year. In each case, your Medical Officer has satisfied himself that the Local Government Board regulations as to Water Supply are complied with. Your Council has during the year adopted Building Bye-Laws for the whole district, by which supervision over the erection of new houses is obtained.

SANITARY ADMINISTRATION.

Sanitary administration in the District is carried out by your Medical Officer and Sanitary Inspector, the latter being also appointed Inspector under the Housing Act, 1910.

The Infectious Disese Hospital was opened during the year on one occasion. There is no hospital in the

district for cases of tuberculosis.

During the year New Building By-Laws have been adopted. No other adoptive Act has come into force.

No chemical or bacteriological work is undertaken by your Sanitary Officers, except in connection with the analysis of drinking water.

No samples have been sent to the Public Analyst.

INFECTIOUS DISEASES.

42 cases of infectious disease were notified in your district during the year, namely,-19 of Diphtheria, 5 of Erysipelas and 17 of Scarlatina, and one case of puerperal Fever.

Diphtheria occurred in epidemic form in the village of Hough-on-the-hill and adjoining hamlets, 13 cases being recorded between September and November. The cases occurred chiefly amongst school children. It was considered advisable to open the Isolation Hospital for the reception of four cases in November, and this was accordingly done. This was the first occasion on which the Hospital has been used, and it was found to be suitable for the purpose.

The patients were removed to the Hospital and all arrangements completed for their nursing and maintenance within 24 hours of the resolution to open the Hospital being adopted.

It should be mentioned that the Council decided, when the original scheme for an Isolation Hospital was adopted, that the building should not be utilised except

under conditions where an epidemic was to be feared. Consequently, the hospital is not opened for every case of infectious disease, nor, in fact, would such a course be possible, as it is not possible to nurse more than one infectious disease in the building at the same time.

17 cases of Scarlatina occurred during the year, being 32 less than in the preceding year. A small epidemic occurred amongst the children attending the School at Carlton Scroop, involving eight children.

Bacterial aids to Diagnosis have not been utilized by your Council, but for the last 5 years diphtheria-antitoxin has been supplied in the case of patients in poor circumstances.

No action has been taken to discover "~~Contacts~~ carriers."

Isolation in the home is carried out as far as possible by isolating the patient, withdrawing other children in the house from School, and in the case of adults taking steps to prevent the spread of infection. Male adults are advised to take lodgings elsewhere, but it must be confessed that such advice is not often taken.

Disinfection is carried out by your Sanitary Inspector at the house. Your Council has not the apparatus for Steam Disinfection of bed-clothes and carpets.

Of non-notifiable infectious diseases, whooping cough was prevalent during the year, and six deaths from the disease occurred. There were no deaths from Measles, of which illness there were probably very few cases.

TUBERCULOSIS.

No notifications of Pulmonary Tuberculosis were received under the 1908 Regulations. There is no existing hospital accomodation in your district for cases of this disease.

INVESTIGATION OF OTHER DISEASES.

There has not been during the year any unusual factor threatening the health of the district, and consequently no enquiries have been necessary. It may be noted that whereas the year 1911 will be long remembered in most large cities for the extraordinary mortality amongst children under the age of one year from ~~diphtheria~~ diarrhoea and enteritis, your district has fortunately been almost exempt from such fatality, only two deaths from this cause being notified. Many ~~deaths~~ cases of infantile diarrhoea have undoubtedly occurred, but not of the grave type which so often proves fatal. It is not easy to find why such great difference between cities and villages should exist in this respect.

Probably a greater percentage of village children are breast-fed than is the case in cities, and there are, of course, fewer people in the same space, but probably sanitary conditions are not quite so good, and the milk supply is quite inadequate.

INFANTILE MORTALITY.

Your Medical Officer can again comment favourably upon the small infantile mortality rate of 91 per 1,000 births.

Your Council is not concerned with the Midwives Act, and the Notification of Births Act was not adopted.

VITAL STATISTICS.

Table I shows that the Birth Rate of the District is 22.33 per 1,000, and the Death Rate 12.7 per 1,000, both figures being at about the average.

The Infantile Mortality is 91.2 per 1,000.

The mortality returns this year differ from those of preceding years, in the respect that information concerning transferable deaths is now at your Medical Officer's disposal. Of these deaths, two in the district were transferable to other districts, whilst 13 deaths occurring out of the district are included in the nett returns, and are found to relate chiefly to residents who have died in the Grantham Union Workhouse, or other Institution outside your district.

Table 3 shows tha causes of and ages at Death during the year. There are no unusual features in this Table.

Table 4, showing the infantile mortality, is appended.

The population, according to the Census Return for the District, is 12,257. This is 169 less than was the case in 1901. It is probable that the actual resident population is rather less than the recorded figure, owing to the influx of non-residents for the Grantham Fair, which took place at the time of the enumeration.

FACTORY AND WORKSHOP ACT.

There are no registered factories in your District. The number of Workshops is 80. Routine inspection of these is carried out. It has not been found necessary to institute proceedings in any case.

During the year your Medical Officer has conducted many systematic inspections.

Yours faithfully,

CHARLES H. D. ROBBS.

REPORT OF THE SANITARY INSPECTOR.

Gentlemen,

During the twelve months ending December 31st., 1911, your Inspector has visited various parishes at different times. Number of visits, 289; mileage covered, 2,069 miles.

NUISANCES.

Written orders were served to abate Nuisances in 12 cases, as follows:-

Overcrowding	3 cases.
Privies in foul state	3 cases.
Animals improperly kept	2 cases.
Drain Nuisance	1 case.
Premises left in such a Condition as to be a nuisance	3 cases.

In one case action was taken before a Court of Summary Jurisdiction, owing to premises being kept in such condition as to be a nuisance, and an order was served therefrom to abate the same.

In addition to the above, twenty letters were written in respect to nuisances arising from drains.

The results of the action taken in the various cases was satisfactory.

FOUL DITCHES.

In addition to certain outfall ditches which are cleansed by order of the Council every half year, the following parishes had their sewage ditches emptied:-Burton Coggles, Ingoldsby, Oasby, Old Somerby, Pickworth, South Witham, and Westby. The results of action taken under the Housing and Town Planning Act, 1910, are incorporated in the Medical Officer of Health's Report.

Yours faithfully,
H. CECIL RUDKIN.
